
New Mexico Humates

Micromate

All natural soil conditioner

- A concentrated source of humic acids which mixes to a suspension containing up to 24% Humic Acid (by weight)
- Oxidized lignite, and natural suspending agent, micronized to average particle size of 15 microns
- Adds organic material by form of liquid suspension containing humic acids with benefit of increased surface area to your soil to enhance uptake of nutrients and stimulate soil life

Net Weight 30 lbs.

Application Rate:

2-4 lbs. per acre as a foliar application, 2 – 3 times per growing season recommended for row crops and forages. Plants need to be just past the seedling stage - about 25% coverage of the ground before the first application. Second application is usually just before flowering, or just before the onset of the reproductive stage of the crop. The 3rd application would be early in the grain fill or fruit/vegetable sizing stage.
